

Mustang II Modular Drop & Stock Spindles

Classic Performance Products (CPP), Placentia, California, presents a brand-new, one-piece Forged Spindle design available in both stock height and 2-inch drop applications. The spindles work with a flat-caliper bracket setup that allows the use of many different brake kits, as well as custom applications. The spindles are crafted to fit with CPP's 11.75-inch Mustang II performance brake kits, as well as the company's 13-inch big brake packages.
